

The Best and Safest Ways to Remove Tattoos

For many people, tattoos are more than just decorations, but a form of self-expression. Unfortunately, there are sometimes circumstances that require people to remove their tattoos. There are several **ways to remove tattoos**, but not all of them are safe. Some are using "traditional" ways, while others use more expensive treatments. However, not all of those methods are safe or convenient.

Here is everything you need to know about removing tattoos, and how you can choose the safest way to do it.

Why Removing Tattoos?

Tattoo lovers may wonder why someone wants to remove his or her ink. However, there are several sound reasons to do it. You may want to remove your tattoos when:

- Your tattoos are bad.

Misspelled or badly-done tattoos are sources of personal embarrassments, especially if they are done by unqualified tattoo artists (or even your "friends" for a prank).

- You want to join a company or government service.

Many companies and government services, such as military and the police, have strict requirements about tattoos. Some may prohibit them, while others only allow a certain amount of ink on the body. For example, tattoos on the face, hands, and neck (where they are visible under uniforms) are usually not allowed.

- Your tattoos are a poor reminder of the past.

Whether they are the names of ex-lovers, or bands that are no longer relevant, it is totally okay if you want to remove them.

- Your tattoos are inappropriate.

Many people have past mistakes that were immortalized in inappropriate tattoos.

Hate group symbols, racist words, or expressions of bigotry can be troubles if they are etched on the skin. This is another good reason to remove tattoos.

While there are good reasons to remove tattoos, the ways to remove them can be inconvenient for many people.

Downsides of Laser Tattoo Removal

Laser is a popular method to remove tattoos. This procedure uses a high-intensity beam to break down all the color pigments that form your tattoo. Many people go to the doctor, but there are also tools to do "home tattoo removal" at home.

Unfortunately, this is not always an ideal choice. There are several downsides associated to remove tattoos with a laser. Here are some of them:

- It is expensive.

Laser treatment is definitely expensive because of the technology used. The common procedure in a clinic starts from 500 USD, and can be more expensive if your tattoo is larger and more colorful. Also, you may need to undergo several treatments to remove big and intricate tattoos.

- It is painful.

Tattoo removal process with a laser is definitely painful, and the procedure usually does not use anesthesia. Patients are often advised to apply anesthesia cream themselves on the skin before the treatment.

- There are side effects.

Since this procedure is invasive, you usually experience side effects. Blisters, redness, and irritation are among the common symptoms. You can also experience

worse side effects with home laser treatment removal product. Hypopigmentation is another possible result, in which the part of the skin that gets treatment becomes paler.

- It is not always effective.

Imagine spending hundreds of bucks just to get a half-baked result. Laser treatment does not always remove tattoo 100 percent, and may still leave marks or faded colors.

The best dermatology treatment to remove a tattoo is of course by a surgeon or related medical professional, but it is a method not everyone can afford.

Downsides of Tattoo Removal with Salt

Some people think that using salt is effective to remove a tattoo. They often mix salt and lemon, thinking that the mixture is abrasive enough to remove ink from the skin. However, this thing is not effective, simply because it is almost impossible. Tattoo ink goes through the outer layer of the skin, but salt only touches the outer layer.

Rubbing salt on the skin is not only ineffective, but it can cause several side effects, such as:

- Irritation or wound.

Salt is abrasive, so if you rub it strongly (especially since you think that it will remove the ink), you will only irritate your skin. If you continue, you can end up with a wound, which will be very painful when touched with salt.

- Inflammation and infection.

When you rub irritating materials like salt on your skin forcefully, you risk inflammation, especially if your skin is sensitive. This can also lead to infection.

- Visible scars.

If you wound your skin with abrasive salt rubbing, it will leave visible scars or wrinkles.

Aside from the side effects, you may not be able to lose all parts of the tattoo, which means you get more losses than benefits.

Safe Alternative for Tattoo Removal

If laser and salt do not work, what is the best solution?

Laserless Tattoo Removal is the best method to remove unwanted ink. The method is easy and pain-free, and you do not need to pay hundreds of bucks. This method combines natural ingredients and safe, useful tips to remove your tattoo. The entire goal is to slowly break down the ink pigments, and let them flow out of your skin naturally.

Laserless Tattoo Removal Guide will give you benefits compared to more intrusive or questionable methods, such as:

- Detailed explanations about skin layers and their relations with inking process.
- Various methods of tattoo removal with their complete side effects and risks.
- Ingredients for home remedies to remove your tattoo. Everything is easy to get and make, and the result is permanent.
- Step-by-step methods to make your own tattoo removal formula, using natural and non-dangerous ingredients.
- Complete methods to remove tattoos with different characteristics (colors, sizes, shapes).
- Tips to return the condition and shade of your skin after tattoo removal.
- Simple tips to mask your tattoos if you need to cover them quickly (such as for job interview).

Laserless Tattoo Removal is definitely the best and safest way to remove your tattoo, without expensive cost or painful side effects.

Removing your tattoo is sometimes unavoidable, but you don't need to get stuck with expensive or dangerous methods. There are other **ways to remove tattoos** that are not painful and costly. The Laserless Tattoo Removal Guide will help you removing regrettable ink, without an expensive cost and long-lasting side effects on the skin.
